

## COMP 3350 Project Iteration 0

### Group 7(To-Do-Bot)

#### **Vision:**

**7/7**

- Vision summary
- Vision statement
- Does it conform with the interview?

Vision statement looks good and confirms with the video.

#### **Planning:**

**7.5/8**

- Big user stories for all iterations
- Detailed user stories for iteration 1
- Does it follow the preferences of the customer based on the interview?

It was a really good idea grouping the user stories so that nothing gets duplicated along the way. However it wasn't mention which user story was created for which iteration. Using Asana is a good step ahead which is going to help in managing and tracking the progress of the project. However, the following issues were found with the submission.

- It wasn't specified which iteration user stories belong to (backlog).
- The idea of detailed user stories is that they are the break downs of big user stories, so if a big story is broken down into 3 or 4 detailed user stories their accumulated cost should be equal to the cost of the big story.

Nice work overall. Best of luck for the implementation.

#### **Total:**

**14.5/15**
